AirPlay 2 update for S100 and A100 now possible

Revox **STUDIO**ART products are in a class of their own. The Revox developers have succeeded in meeting the high standards of original studio sound quality with particularly compact speakers. And they are ideally suited for use in several rooms and can also be combined to form a wireless 5.1 home theater set.

NEW! Our STUDIOART products S100 and A100 are now also AirPlay 2 capable!

Stream music from Apple Music, YouTube Music and Spotify or enhance the audio experience from YouTube videos and Netflix. Play everything from any iPhone, iPad, Mac or Apple TV - perfectly synchronized.

The Revox **STUDIO**ART products can now also be integrated into a manufacturer-independent multiroom system.

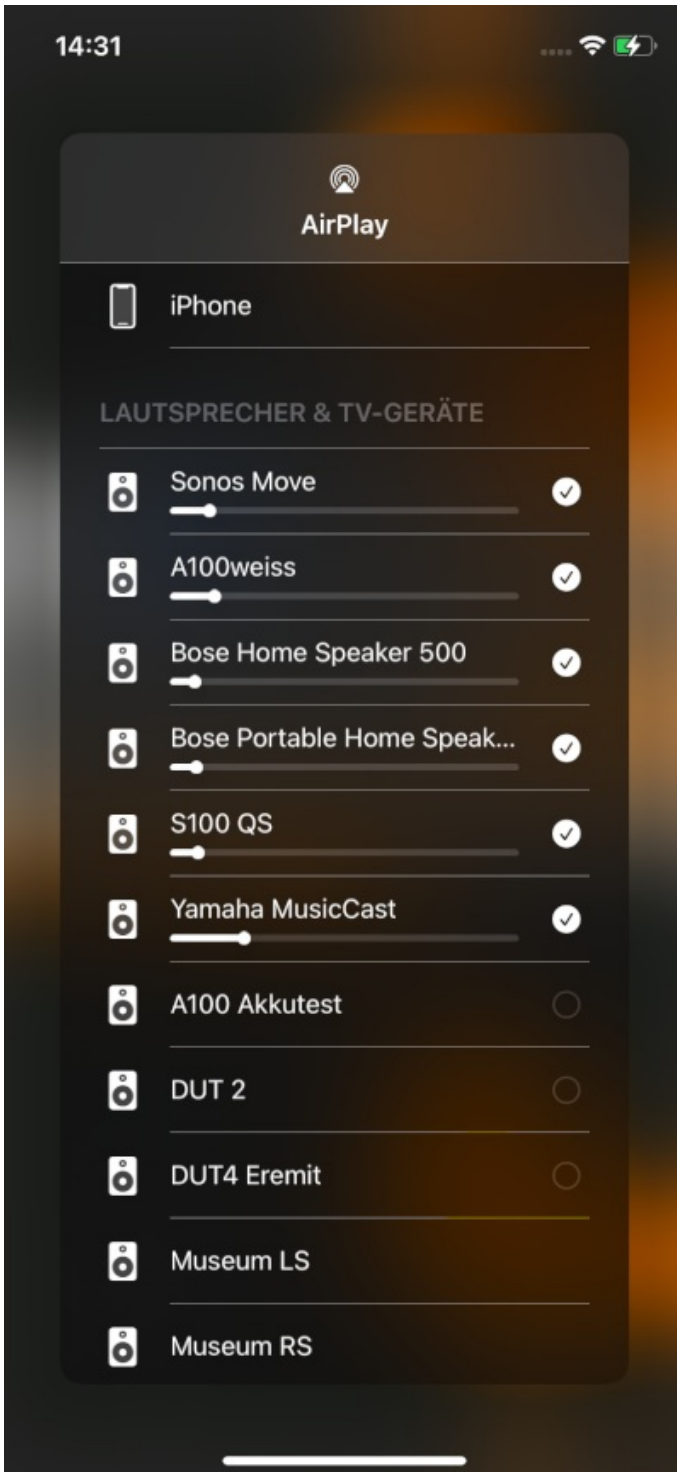

AirPlay 2

Whether at the customer's or at your point of sale: All **STUDIO**ART loudspeakers A100 and S100 receive the new capabilities via an update. A detailed description of the automatic update process is given below.

What is AirPlay 2?

AirPlay 2 is a multi-platform interface from Apple and is used to transfer films, music or photos to a compatible device via WLAN. For example, you can send a film from the iPhone to the television or transfer music from the MacBook to a speaker.

YOUR BENEFIT:
All devices that use Airplay 2 are compatible with each other. Thus, after the update, the Revox **STUDIO**ART products can also be integrated into a manufacturer-independent multiroom system (see picture). However, an Apple device is always required as the sending starting point.

More information about AirPlay 2 at
www.apple.com/airplay/ .

Perform the STUDIOART update

S100: LS9 V3946.0, processor (MCU Host) 59.0 resp. 59.1
A100: LS9 V3946, processor V36

A100 Room Speaker and S100 Audiobar receive their new software automatically when the device is restarted. In any case, make sure that your network (LAN / WLAN) is accessible at the time of the restart.
If an A100 Room Speaker is wirelessly connected to the Audiobar S100 as a surround rear speaker or as an additional loudspeaker to an A100, it cannot take part in a software update because it is not itself connected to the network via WLAN / LAN.

In this case you have two options:
1. Switch off the main speaker (S100 or A100) completely. With the S100 Audiobar you can do this by pressing and holding the power button on the remote control, the LED lights up RED. The connection to the surround or additional loudspeaker is automatically disconnected. You can now update it by restarting the device - network connection required.

2. Remove the A100 as a connected loudspeaker in the **STUDIO**ART app (Setup / Connect / Disconnect loudspeakers). You can now update it by restarting the device - network connection required. After the update, it can then be integrated again as an additional loudspeaker or rear speaker.
The main loudspeaker does not have to be switched off beforehand for this option.

We wish you great entertainment now with AirPlay 2!
