

**Revox Multiuser 3.0 Remote License**

**Art.-No.: 156306040**

**100 EUR / 100 CHF**

The remote license is activated device-specifically by Revox and enables remote access to a Multiuser 3.0 Server (**STUDIOMASTER M300 / M500 or V400**).

The costs are to be paid once, the license remains active afterwards without recurring fees.

The remote access can be ordered ex factory, or for already existing Multiuser 3.0 Servers (then under specification of the serial number).

In a multi server solution, a single remote license for one server is sufficient. The remaining Multiuser servers and amplifiers can be operated and configured via this access.

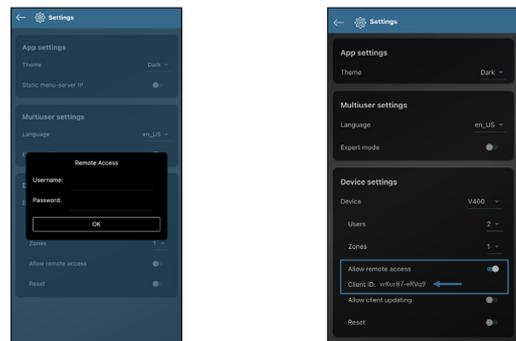

After ordering, you will receive the access data from Revox so that you can configure the remote access in the Multiuser App.

## Enable remote access

open the device settings in the Multiuser App and activate remote access

Now enter the login data. After activation you will receive a client ID

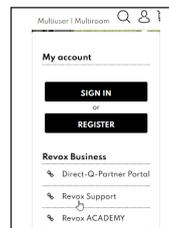

Save this client ID for future remote access to the Multiuser 3.0 system

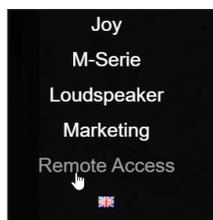

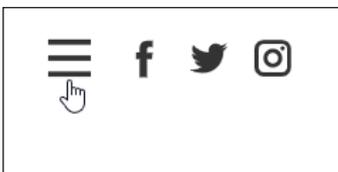

## Remote access to the system

The remote access to a multiuser system is located in the password protected area of our support page.

You can find it on our homepage [www.revox.com](http://www.revox.com) in the upper right corner in the User icon. If you do not have a login yet, you can register yourself at the support page.

Open the sidelist of the support page and click Remote Access there

Enter the client ID and start the connection with „Launch remote access“.

Now the Multiuser Web App opens and you can operate and configure the system. The Configurator for advanced settings is also available to you via remote access.
