

Dear Revox Partner,

We are pleased to inform you that a Multiuser 3.0 update is imminent, which brings with it many important new features.

This update is also of great importance with regard to the upcoming market launch of the Revox **STUDIOMASTER A200**.

Read the details below and use these new possibilities for your customer meetings.

Best regards

Your
Revox Team

Multiuser 3.0 Update

Software Update 0.7.0

The software update 0.7.0 for the Multiuser 3.0 system is currently available on our online update server.

The most important new features and adjustments in version 0.7.0:

- Introduction of offline mode for M300/M500 and M30:

A network connection is no longer required for operation.

Local sources can be played without an active network connection. Operation then e.g. with M300/M500 via front display or C100, C18 and RC5 or trigger.

- Integration of the A200 into the MU3 system:

NOTE: For the correct operation of the A200 in combination with existing MU3 systems (e.g. M500, M300, M30, V400), **the update to v0.7.0 is mandatory for all systems**.

- Possibility of audio encoding for WLAN:

To improve the WLAN audio performance, the WLAN audio encoding option can be activated in the configurator for each room. Multiroom audio to this room from a remote source is then no longer transmitted in PCM format but as a compressed format.

Local playback and multiroom via LAN are excluded from this.

- Airplay2 functionality (Bonjour service) can now be deactivated and reactivated in the MU3 app via the room 3-point menu (M500/M300/M30/A200).

- New “room/zone:toggle” action introduced:

The toggle action can be used in triggers, for example, to either switch the room/zone on or off depending on the current power state.

The action can be extended by a postfix, e.g. “:select:@user”, “:select:@local”, for the initial selection after a device restart. This allows classic power buttons (on/off) to be mapped via MU3 triggers, for example.

- Various minor improvements and bug fixes.

General performance improvements for all MU3 systems.

App Update 3.0.9

This is new in the multiuser app

- Integration of the A200 and multispeaker function/view in room list introduced.
- User/room/zone offline popup/hint introduced, which guides the end user to the user/room/zone selection.
- Introduced two-line text display for browser entries: Information about sender or title is displayed in a second line, so more characters are available.
- New action server view for mobile and desktop platform introduced: In the “Tools” section in the MU3 app, the new action server view can now be opened directly from the app instead of “Send Action”.

Note: Not supported for web app: This still has the “Send Action” function!

- Airplay2 functionality (Bonjour service) can now be deactivated and reactivated in the MU3 app via the room 3-point menu (M500/M300/M30/A200).

NOTE:

All new features and changes for the software and app can be found in the changelog.
Available on our support page or [here as a download](#) or in the attachment.

Specific changes per device type

M300 / M500

- Introduction of mono mode for power amplifier and pre-out, this can be activated or deactivated via the configurator.
- Revision of the HDMI CEC interface
- Offline mode: In offline mode, local sources can now be selected directly via the M500/M300 front panel. The “No network” splash screen is obsolete and has been removed. A connection indicator (LAN/WLAN/Offline) has been introduced in the front display.

M30

- Introduction of mono mode for power amplifier and pre-out, this can be activated or deactivated via the configurator.
- Offline mode: Network status entry added to front menu

V219

- Alarm clock setting adjusted, after a user change the alarm clock was not triggered under certain circumstances.
- Zone switch-on problem fixed, under certain circumstances it could happen that not all rooms were switched on via zone command.
